

Enterprise Architecture-as-a-Service (EAaaS)

Provides organisations with strategic and technical direction, roadmap development, architecture governance, and design assurance.

Overview

Axians EAaaS gives organisations direct access to senior, security-enabled architecture expertise across network, cloud, security, and data centre domains. Our architects provide the strategic clarity, governance discipline, and design assurance needed to drive successful transformation - while ensuring security is embedded by design.

EAaaS helps organisations simplify complexity, align technology with business strategy, and adopt modern architectures that are scalable, interoperable, and secure.

Enterprise architecture and design consultancy assists with:

1. Broad, strategic view of the entire IT estate

Axians takes an end-to-end, enterprise-wide perspective to ensure every IT decision contributes to long-term business outcomes. By evaluating your full IT landscape - across cloud, network, cybersecurity, and data centre - we create a unified architectural view that eliminates silos, reduces duplication, and supports future growth.

2. Filling senior skills gaps with enterprise architects

Specialist architecture talent is scarce, especially when organisations require secure-by-design and multi-domain expertise. EAaaS provides direct, on-demand access to highly experienced senior architects who strengthen internal capability, accelerate decision-making, and ensure that security is embedded from the outset of every design.

3. Governance & design assurance you can rely on

Transformation programmes often fail due to inadequate governance and design decisions. Axians EAaaS delivers structured governance frameworks, reference architectures, design approvals, and decision documentation - ensuring every project remains aligned with enterprise strategy, technical standards, and security policy.

4. Modern architecture design across multi-vendor environments

Our architects are fluent across a range of leading technologies, enabling organisations to adopt hybrid and cloud-first architectures without vendor lock-in. EAaaS integrates multi-vendor solutions into cohesive, secure designs that maximise performance, improve interoperability, and reduce operational risk.

5. Clear and actionable roadmaps

EAaaS provides pragmatic, outcome-focused roadmaps that translate organisational priorities into executable technology initiatives. These roadmaps prioritise investment, highlight dependencies, and provide a structured plan to evolve your architecture at the right pace - balancing innovation, resilience, and cost efficiency.

6. Collaborative strategy alignment workshops & architecture documentation

Axians runs strategy alignment workshops that bring stakeholders together to create shared understanding and unified direction. We produce coherent architectural documentation (i.e. Standards, Policies, Compliance, Reference Architecture, Blueprints etc.) - that form the backbone of consistent and repeatable architectural practice across your organisation.

What you gain with EAaaS

- ✓ Stronger strategic alignment
- ✓ Secure-by-design architecture
- ✓ Reduced delivery and compliance risk
- ✓ Faster, more confident decision-making
- ✓ Lower reliance on scarce internal expertise
- ✓ Scalable, future-proofed IT foundations

Ideal for organisations who want to

- ▶ Modernise infrastructure without losing control
- ▶ Improve cloud, network, and security architecture maturity
- ▶ Reduce transformation risk and accelerate delivery
- ▶ Implement consistent governance and architectural standards
- ▶ Build a resilient, interoperable, and secure IT estate
- ▶ Have Enterprise Architecture capability without the cost and risk of a full-time hire
- ▶ Have flexible access to expertise aligned to organisational needs, when needed

Next Steps

Axians EAaaS is available as a flexible monthly subscription or to dovetail existing or planned programs. Contact us today to find out how we can optimise networking and cybersecurity for your organisation.
